**Switch to SWEP20 today!  
SWEP04 welding process control for wire phase-out**

Dear Ladies and Gentlemen,

Following a success story which has spanned 30 years, certain individual components of our SWEP04 can no longer be reliably procured. We are writing to inform you at this early stage that the SWEP04 is scheduled for phase-out.

***An overview of the most important deadlines for you:***

\*\*\*\*\*

- Last orders 31/12/2017
- End of last repairs 31/12/2018

The purpose of this early notification is to allow you the opportunity to switch your Schlatter welding plant over to our **replacement product, SWEP20**, in a timely fashion and without having to rush.

The SWEP20 is a consistently enhanced and improved version of the existing Schlatter welding controls. It consists of a basic module and at least one phase shift module, through which all joining-related parameters are managed and implemented in the process.

The system parameters and welding programmes are entered and displayed by a separate input/output device.

**Take the opportunity to replace your welding controller during the next scheduled inspection of your Schlatter welding machine and avoid costly unscheduled down-times during peak demand!**

The replacement, including dismantling the existing welding control unit and the installation of the new components, will be performed by a Schlatter service technician within a few days, and which will also include a theoretical and practical introduction.

The software adaptation will be carried out by a specialized software engineer. This ensures downtime of your plant is kept to a minimum.

Aside from the high availability of replacement parts for the new SWEP20, you'll also benefit from lower prices as compared to SWEP04 replacement parts, which are progressively harder to come by.

To receive a customised offer or for additional information, please contact your spare parts manager or contact our spare parts service by phone at +41 44 732 71 11 or via email at [spareparts@schlattergroup.com](mailto:spareparts@schlattergroup.com).

Kind regards  
**Schlatter Industries AG**
