Customer Newsletter – New Generation of PCs for PLS V5/6 and PLS Win R7

Dear Ladies and Gentlemen,

With this correspondence, we wish to inform you about a new product modification in the the wire welding sector. With the help of the new **HP EliteDesk 800 G1** PC, Schlatter has now advanced to a new generation of backup PCs.

As the core element of every welding plant, the PC plays a central role.

That's why, if your computer is eight years old or more, Schlatter recommends you to consider upgrading to the new generation computer **as soon as possible**.

With the help of a new computer, individually adapted to suit your welding plant, you can reduce the risk of PC-related downtimes and avoid high costs brought on by production losses. Replacing your computer as a preventative measure is a sound investment for the future.

Exchanging your PC is simple plug-and-play and does not require a specially trained technician. All the necessary settings and tests are done ahead of time at our facility.

To ensure a smooth transition, all we need from you is a current backup. The instructions can be found at the following link:

www.schlattergroup.com/en/services/upgrades/backup

To receive a customised offer or for additional information, please contact your spare parts manager or contact our spare parts service by phone at +41 44 732 71 11 or via email at spareparts@schlattergroup.com.

Kind regards

Schlatter Industries AG
