

## Upgrade Schlatter Commander System Posiweld

Because of technical improvements we are offering you an upgrade for the original control panel (BHG), the HUSI Commander or the Schlatter Commander, on the Schlatter Commander II. The upgrade can be applied to the following Schlatter Welders from the Systems POSIWELD Megaflex, Flex, Twinflex, Aquila, Ursa and Serpens.

### Adaptation and Upgrading the Machine control

A Panel-PC for the control of the Commander, part-programming and management will be built into the existing control-cabinet. The additional monitor in the control cabinet allows a comfortable editing of the part-programs and a secure backup management.

### The new Schlatter Commander II offers the following features:

- Up-to-date and ergonomical design
- Machine control with TFT Touch screen or keyboard
- Enter the welding parameters directly at the PC or control panel
- Electronic handwheel for simple control of all NC Axes

- Creating of part-programs (Teach-In)
- Reading and backup of part-programs
- Status and error display, as well as the reliable function of the dead man's switch

### Option

The machine can be updated with a remote diagnosis function. A PC-PC connection between the machine-control and the PC of Schlatter-support can be established with a modem and a telephone line/internet line.

For comprehensive information we are at your service.
