

MeshStudio - Design your Mesh the Easy Way

The Schlatter MeshStudio is a 3 dimensional drawing program for welded wire mesh with multiple additional functions. It is used by wire mesh producers. The MeshStudio standardizes the interchange of mesh data between customer, producer and Schlatter mesh welding plant.

Easy Basic Version

You may draw your meshes quickly and easily. You will see the result in a three dimensional presentation. It can be turned and tilted into any position.

The dialogue is optimized for input of mesh data. You will find export functions for drawings and mesh data that may be used in quotations and shop work sheets.

Professional Version

With the professional version the mesh data can be transmitted directly to the Schlatter mesh welding plant.

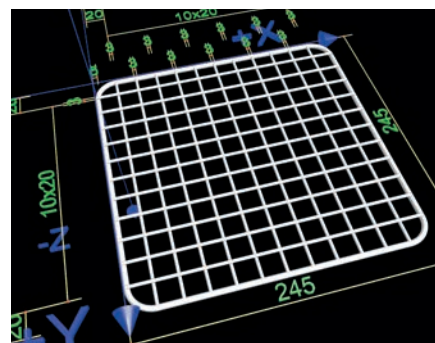

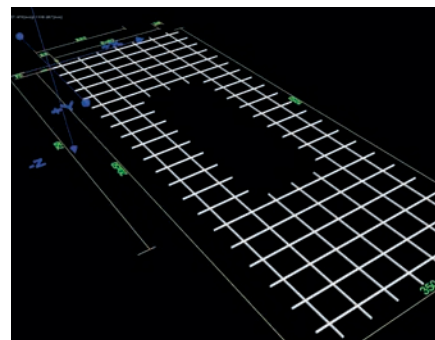

The integrated welding expert will suggest the setting data for welding the designed mesh.

It also calculates the material requirements for a specified lot size.

Enterprise Version

With the enterprise version you will have a centralized mesh data management in a data base.

Search routines allow to search within the data base by all characteristics.
